

## **Exp 8: Reproducing an Image Using Prompts for Image Generation**

**Reg. No.212222090012**

### **Aim:**

To demonstrate the ability of text-to-image generation tools to reproduce an existing image by crafting precise prompts. The goal is to identify key elements within the image and use these details to generate an image as close as possible to the original.

### **Procedure:**

1. **Analyze the Given Image:** ○ Examine the image carefully, noting key elements such as: ■ Objects/Subjects (e.g., people, animals, objects) ■ Colors (e.g., dominant hues, contrasts) ■ Textures (e.g., smooth, rough, glossy) ■ Lighting (e.g., bright, dim, shadows) ■ Background (e.g., outdoor, indoor, simple, detailed) ■ Composition (e.g., focal points, perspective) ■ Style (e.g., realistic, artistic, cartoonish)
2. **Create the Basic Prompt:** ○ Write an initial, simple description of the image. For example, if the image shows a landscape, the prompt could be "A serene landscape with mountains and a river."
3. **Refine the Prompt with More Detail:** ○ Add specific details such as colors, mood, and time of day. For example: "A serene landscape during sunset with purple mountains, a calm river reflecting the colors of the sky, and a few trees along the shore."
4. **Identify Style and Artistic Influences:** ○ If the image has a particular style (e.g., impressionist painting, realistic photography, minimalistic), include that in the prompt. For example: "A serene landscape in the style of a watercolor painting with soft, blended colors."

5. Adjust and Fine-tune: ○ Refine the prompt further by adding specific instructions about elements like textures, weather conditions, or any other distinctive features in the image. For example: "A serene landscape during sunset with purple mountains, a calm river reflecting the colors of the sky, a few trees along the shore, and soft, pastel tones in the clouds."
6. Generate the Image: ○ Use the crafted prompt to generate the image in a text-to-image model (e.g., DALL·E, Stable Diffusion, MidJourney).
7. Compare the Generated Image with the Original: ○ Assess how closely the generated image matches the original in terms of colors, composition, subject, and style. Note the differences and refine the prompt if necessary.

### **Tools/LLMs for Image Generation:**

- DALL·E (by OpenAI): A text-to-image generation tool capable of creating detailed images from textual prompts. ○ Website: DALL·E
- Stable Diffusion: An open-source model for generating images from text prompts, known for its flexibility and customizable outputs. ○ Website: Stable Diffusion
- MidJourney: A popular AI tool for generating visually striking and creative images based on text descriptions. ○ Website: MidJourney

### **Instructions:**

1. Examine the Given Image: Study the image to understand its key features—objects, colors, lighting, composition, and any stylistic choices.
2. Write the Basic Prompt: Start with a simple description of the primary elements in the image (e.g., "A sunset over a mountain range").
3. Refine and Add Details: Improve the prompt by incorporating specifics like colors, shapes, textures, and style (e.g., "A sunset

over purple mountains, with a golden sky and a calm river flowing through the valley").

4. Use the Selected Tool: Choose an image generation model (e.g., DALL·E, Stable Diffusion, or MidJourney) and input the refined prompt.
5. Iterate and Adjust: If the initial result isn't quite right, adjust the prompt further based on the differences observed between the generated and original image.
6. Save and Document: Save the generated image and document your prompt alongside any observations on how the output compares to the original.

### **Deliverables:**

1. The Original Image: Provided image for reference.
2. The Final Generated Image: The image created using your refined prompt.
3. Prompts Used: The text prompts created during the experiment.
4. Comparison Report: A report highlighting the differences and similarities between the original and generated images, along with any adjustments made to the prompt.

### **ORIGINAL IMAGE 1:**

### Image description:

🔍 **Sky:** The sky is ablaze with **vibrant hues of orange, pink, purple, and red**, suggesting a breathtaking **sunset or sunrise**.

🔍 **Water:** The **ocean waves** are flowing gently over **dark, rugged rocks**, creating a soft, misty effect—likely due to a **long exposure** technique in photography.

🔍 **Rocks:** Jagged, smooth-edged **rocks** are scattered across the shore, with water cascading over them like miniature waterfalls.

🔍 **Mood:** The overall mood is **peaceful and mystical**, evoking a sense of calm and natural beauty.

### PROMPT :

*"A serene coastal scene at sunset with dramatic skies painted in shades of orange, pink, and purple. Gentle ocean waves flow smoothly over dark, rugged rocks, creating a soft, misty effect from long-exposure photography. The glowing horizon reflects off the water, evoking a sense of calm, wonder, and natural beauty. The*

*composition leads the eye toward the distant sea, blending vibrant light with shadowed foreground textures."*

**AI IMAGE GENERATOR RESPONSE:**

**ORIGINAL IMAGE 2:**

## IMAGE DESCRIPTION:

### ? Birds:

- The two birds have **vivid orange breasts, blue wings**, and soft **white and gray heads**.
- They face each other gently, creating a sense of **harmony and connection**.
- Their feathers are rendered with a soft, almost painterly texture.

### ? Flowers:

- Surrounding the birds are **abundant blossoms** in shades of **pink, peach, cream, and red**.
- The flowers are likely cherry or apple blossoms, symbolizing **spring, love, and renewal**.

### ? Background:

- The soft, blurred background features warm tones that enhance the gentle, romantic mood of the image.
- There's a **subtle glow** suggesting early morning or golden-hour lighting.

## PROMPT:

***“Two birds with vivid orange breasts, blue wings, and soft white and gray heads face each other gently, creating a sense of harmony and connection. Their feathers are rendered with a soft, painterly texture. Surrounding them are abundant blossoms in shades of pink, peach, cream, and red—resembling cherry or apple blossoms***

*that evoke themes of spring, love, and renewal. The background is softly blurred with warm tones and a subtle golden-hour glow, enhancing the romantic and tranquil mood of the scene”.*

#### **AI IMAGE TOOL RESPONSE:**

#### **Conclusion:**

By using detailed and well-crafted prompts, text-to-image generation models can be effective in reproducing an image closely. The quality of the generated image depends on how accurately the prompt describes the image's key elements. The experiment demonstrates the importance of prompt refinement and iteration when working with AI tools to achieve desired outcomes. With practice, the model can generate images that closely match real-world visuals, which is useful for creative and practical applications.
